

**In the Claims**

Please cancel claims 1-22 and 24-26. Therefore, claim 23 remains for examination

1-22. (Canceled)

23. (currently amended) A system for controlling unpolarized electromagnetic (~~EM~~) radiation comprising:

a substrate;

a single layer of material on the substrate, the material reflecting the electromagnetic ~~electro-magnetic (EM)~~ radiation, the reflected electromagnetic ~~EM~~ radiation being polarized, the reflected electromagnetic ~~EM~~ radiation having a bandwidth;

an electric field generator for generating a variable electric field in the layer of material;  
and

a controller for controlling the electric field generator;

whereby the controller controls the electric field generator to generate a field in the layer of material and whereby the bandwidth of the reflected electromagnetic ~~EM~~ radiation changes in response to the change of the electric field.

24-27. (Canceled)
